SUMMARY

Forward Deployed Engineer—oriented software engineer and end-to-end builder: I ship full-stack systems from zero to production, sit with business stakeholders to uncover the real problem, and turn it into working, adopted products with engineering and AI. Technology is the leverage; what drives me is creating value and moving things forward.

EDUCATION

University of Pennsylvania, School of Engineering and Applied Science — *M.S. in Data Science* Aug 2022 – May 2024

- **GPA:** 3.93/4.0 Research Assistant, Weitzman School of Design TA, Geospatial Data Science in Python

ShanghaiTech University, School of Information Science and Technology — *B.S. in Computer Science, Minor in Finance* Aug 2018 – Jul 2022

- **GPA:** 3.70/4.0 (Top 10%) Outstanding Graduate Varsity football striker (Golden Boot)

INDEPENDENT PRODUCTS

Full write-ups, screenshots & demos at my [personal website](#)

- **Psychometric Assessment Platform** (product design / domain / server deployment / development / growth): built on Next.js + PostgreSQL with quantified assessments, dimension distributions and analytics; **5,000+ users, 8,000+ assessments, ~20 DAU**
- **Xiaohongshu Auto-Operation System** (solution design / agent orchestration): MCP + Python pipeline for content generation / scheduled posting / comment interaction / traffic funnel, live storefront; **fully autonomous**
- **ReadyToGo · Travel Packing Assistant** (product design / development / App Store launch): a fully offline iOS packing app on React Native + Expo + SQLite, no account / no cloud sync; **live on the App Store**
- **Bajie · Habit-Quitting Assistant** (product design / development / App Store launch): native iOS habit-quitting tracker with progress visualization and reminders; **live on the App Store**
- **Polymarket Watch Bot** (strategy design / server deployment / alerting): Python scanner for abnormal price signals and high-probability orders with real-time Feishu callbacks; **10%+ live return**

EXPERIENCE

PICC (People's Insurance Company of China)

Aug 2024 – Present

Technology Operations Dept. — Data Engineer

Beijing

- Independently designed and built the **“Ops Metrics” performance system**, replacing manual Excel calculation and now **a standardized quarterly mechanism**; a single run covers **600+** in-house and outsourced ops staff across 7 divisions, 17 tech lines and 53 metrics, with results **used for outsourced-staff promotion/demotion**
- Leadership set the metric direction; I **defined the detailed criteria by aligning one-on-one with 10+ tech-line owners** — iterating the scoring model on reasonable requests and using data to drive consensus on a unified standard
- Integrated heterogeneous **SQL / Jira / Excel** sources into a multi-dimensional weighted scoring engine with automated validation and analytical reports, delivered end-to-end single-handedly
- Built **“Incident Diagnosis Snapshot”** (deployed on the company intranet): on incident trigger it auto-aggregates multi-source monitoring data, uses an LLM to produce a sourced, fact-only situation brief (model constrained to restate given data, no free generation, to suppress hallucination), rendered to a PNG dashboard pushed to the incident group
- Built **“NLU Auto-Grouping”** (deployed on intranet): a single natural-language sentence pulls the relevant systems' ops/dev owners into the incident group
- Led design and development of an **Incident RCA Agent**: a three-stage pipeline (parallel multi-source collection → multi-round LLM hypothesis testing → **Top 3 suspected root causes + evidence chain**) to assist on-call triage; centered on a **knowledge-precipitation flywheel** — post-mortem ground-truth root causes, misjudgment feedback and investigation traces flow back to continuously grow **failure-pattern / case knowledge bases** that feed the Agent

Souscout

Jun 2023 – Aug 2023

Data Engineer Intern

New York

- Scraped football club and player data across multiple sites with **Selenium**, bypassing Cloudflare detection; 60% speedup via multithreading

- Designed a player entity-matching method using feature vectors, rule templates and similarity scoring for cross-site ID matching

Youwei Intelligent

Feb 2022 – Jun 2022

Software Development Intern

Shanghai

- Built backend in **Django** handling frontend requests, data storage and third-party integrations
- Optimized existing APIs and added authentication; introduced Celery queues, cutting some page response times by 50%

Deloitte

Aug 2021 – Nov 2021

Risk Advisory — Data Analysis Intern

Shanghai

- Predicted corporate financial risk with decision trees and batch-generated assessment reports via **python-docx**, saving 30 hours per quarter

PROJECTS

Quantitative Trading Strategy & Backtesting System

- Built a multi-dimensional feature matrix; **random-forest** stock selection with multi-dimensional probability scoring and threshold-based signal generation
- Built a backtesting framework on **Backtrader** with dynamic position sizing, slippage and transaction-cost simulation, and max-drawdown constraints

Mini-Google Distributed Search Engine

- Built a dynamic web server with **Java** Sockets: routing, session management, exception handling and HTTPS
- Designed a distributed key-value store with hybrid memory + disk storage; implemented an RDD-like architecture supporting MapReduce operators
- Developed a distributed crawler for bulk web crawling; PageRank-based ranking and retrieval, deployed end-to-end on AWS

SKILLS

- **AI & LLM:** LLM applications, AI Agent orchestration, MCP, LLM APIs, Prompt Engineering
- **Full-stack:** Next.js, React, React Native / Expo, Django, Flask, Node.js, TypeScript
- **Data & Backend:** Python, Pandas, SQL, PostgreSQL, Kafka, Spark, ETL
- **DevOps:** Linux server deployment, Nginx, Aliyun ECS, Git, Vite, SQLite
